### **ABSTRACT**

The aim of this 2D animation project is to give the viewers a solid understanding/information on what to do in case disasters occur in their surroundings. The group found out that regular elementary school pupils do not have enough information on what to do in case of calamity occurrence within the area. Thus, this 2D animation project was proposed in order to oppose these problems.

The 2D animation project includes the following topics and information about natural disaster, such as fire, floods, landslide, typhoon and earthquake. This project is made purposely to give the audience enough information on what to do during a disaster occurrence. The video includes one (1) main character named Juan who will give the audience enough information about the topic.

The video only focuses in giving enough information to the audience regarding risk reduction program.
